

# ENVIROPASTURES™

## WINTERFEED

### A Winter Active Multi Graze Annual Mix

The winter feed mix is a short term, annual crop that will provide high levels of dry matter with an opportunity for regrazing after the initial feed. Although this mix has an annual base, the legumes and herbaceous species allow this mix to keep producing through first grazing, meaning multiple feeds late in the season. This helps bridge the gap between traditional winter crops and springtime growth.

Sowing Rate: **44kg per Ha**

Perenniality: Annual

Type: 

Rainfall:  **500-800**  
Rainfall (mm)

*We provide seed mixes specifically designed for New Zealand's unique settings and situations. Our team of Farmers and Growers have developed and refined seed mixes for pastoral settings that will provide Organic Matter, alleviate compaction and increase sub-soil activity. We Know the use of cover crops and regenerative practices greatly improves soil structure and microbial activity.*

### BENEFITS:

- Annual winter crop providing multiple grazings
- Contains winter active legumes
- Produces bulk feed with the option to re-graze
- Provides greater flexibility than traditional winter crops
- Adds flexibility around re-sowing timing.
