

Herbivore

FORAGE CHICORY

Perenniality: **LONGEVITY 1-3 YEARS**

Sowing Rate (kg/ha):

1-2 IN PASTURE MIX

6-8 AS A STAND ALONE CROP OR WITH CLOVER

HERBIVORE PROVIDES HIGH ENERGY FORAGE WITH PROVEN ANIMAL HEALTH BENEFITS AND INCREASED ANIMAL PRODUCTION.

Herbivore is a **new**, high quality leafy forage chicory with erect growth for improved feed utilisation. Herbivore has very fast establishment and regrowth vigour, meaning early and faster grazing rotations may be achieved. Herbivore excels in a range of soil fertilities and can tolerate moisture stress for long durations with help from its deep fibrous tap root. It also draws high levels of nutrients and trace minerals from deep within the soil reservoirs and distributes these to the leaf to give a very high quality Dry Matter (DM) / Digestibility percentage as well as high metabolisable energy (ME) and crude protein levels.

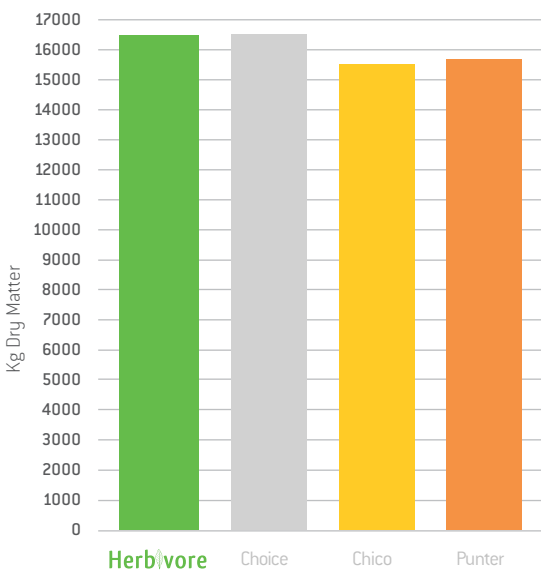

AGRONOMIC FEATURES:

- + High yielding, erect perennial forage chicory
- + Fast establishment and regrowth vigour
- + Leading early season DM production
- + Outstanding summer productivity and quality
- + Deep-rooted species enhancing mineral uptake
- + High digestibility

FORAGE CHICORY DRY MATTER PRODUCTION

Total establishment, combined dry matter (DM) production.

FORAGE CHICORY DRY MATTER PRODUCTION

Monthly cuts and percentage of mean.

Highlighted demonstrates Herbivores early season DM advange.
