

Soprano

FORAGE KALE

Leaf to stem ratio: **High**
 Disease resistance: **High**
 Sowing Rate: **5 KG/HA**

SOPRANO IS A HIGH YIELDING INTERMEDIATE STEAM SIZED KALE.

Soprano is a new high dry matter and high utilisation forage kale. Soprano has high leaf to stem ratio resulting in advanced palatability of the leading dry matter mass, meaning increased animal intake and reduced wastage per percentage of higher leaf ratio to less palatable stalk.

The later flowering attributes of Soprano allow an improved grazing window, meaning greater flexibility for late season grazing is offered.

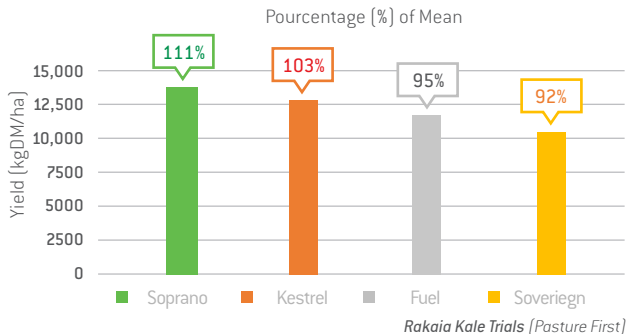

AGRONOMIC FEATURES:

- + Leading dry production
- + Low input/cost drymatter
- + High leaf to stem ratio
- + Late flowering

STOCK SUITABILITY:
