

ENVIROPASTURES™ Sowing Rate: 34kg per Ha

SUMMERFEED™

A multi graze annual mix

Designed as an annual summer crop with the ability for multiple regrazing, this mix provides feed in both quality and quantity. This mix is highly palatable with the bulk of its growth occurring in late spring and early summer, followed quickly by regrowth after subsequent grazings. This mix is a punchy, short term feed option providing large quantities of dry matter in a short amount of time. Leaving with perennial base.

Type:

Rainfall:

BENEFITS:

- Annual summer crop providing multiple grazings
- Bulk dry matter (DM) in early Summer
- Highly palatable
- Great flexibility allowing multiple grazings
- Quick regrowth post grazing

NOTES:
