

ENVIROPASTURES™

Reduces soil compaction by up to 50%

Sowing Rate: **100kg per Ha**

Perenniality: Long Rotation

REBOOT™

LONG ROTATION GRAZING MIX

PROVEN HIGH SOIL CARBON SEQUESTRATION

Reboot is designed as a medium to long term regenerative program

REBOOT is a High yielding, High Dry Matter (DM) producing mix providing strong remedial benefits without compromising feed production whilst maintaining high protein and ME levels. REBOOT is a perennial pasture based mix. REBOOT ensures high levels of vegetative growth great for grazing whilst enhancing soil wellbeing over the course of its life, multiple soil carbon tests have proven that reboot will significantly increase soil carbon. Also an increase of worm and sub-soil fungal activity as well as water retention capabilities. REBOOT is a well balanced mix that also suits all situations where compaction and pollination are issues.

Type:

Rainfall:

BENEFITS:

- Proven high soil carbon sequestration
- A medium to long term regenerative seed mix
- Bulk dry matter yields for grazing or soil re-entry
- Significantly alleviates compaction
- Good winter activity

NOTES:
